Summary

I am a Web Engineer with a solid foundation in the MERN Stack, always eager to take on new challenges. I thrive in small team environments, working on diverse projects where I leverage Python for scripting and web scraping to add a dynamic edge to my skill set.

As an avid learner and practitioner of AI, I bring innovation to the forefront by integrating AI models into web applications and exposing their potential through Flask APIs. My journey in web engineering is about transforming possibilities into realities, constantly pushing the boundaries of what's possible.

Experience

YallaCompare

Frontend Developer
